

ProcureFlow^{PF} User Manual

Farmer procurement scheduling, live queue management and direct support

Version 1.5 • 10 September 2026 • Software prototype for SIH26032

ProcureFlow — a focused, multilingual procurement-service MVP

This manual covers the public website, installable Android web app, automated ProcureBot assistant, farmer/staff-to-admin live chat, notifications and operational dashboards.

1. Product at a glance

ProcureFlow helps farmers choose a procurement centre, confirm eligibility, reserve a token, track queue wait time and follow produce through procurement and payment. Centre staff operate queues; administrators manage capacity, alerts, records and support conversations.

Farmer	Centre staff	Administrator
Book and track visits; contact support	Advance queues and procurement stages	Manage schedules, records, alerts and chats

Demo accounts

- Farmer — farmer@demo.in / farmer123
- Centre staff — staff@demo.in / staff123
- Administrator — admin@demo.in / admin123

No ChatGPT account is required. ProcureFlow uses its own demonstration role sign-in.

Role-based ProcureFlow access screen

2. Farmer journey

2.1 Choose the right centre

Compare nearby centres by travel distance, available slots, queue size and estimated wait. The recommendation favours the least-congested practical option.

The screenshot displays the 'SMART CENTRE RECOMMENDATION' interface for a farmer named Namaskar, Ramesh. The interface is divided into several sections:

- Header:** 'SMART CENTRE RECOMMENDATION' in a yellow banner.
- User Greeting:** 'Namaskar, Ramesh' with a 'Book a token' button.
- Token Information:** 'Wheat - Token #18', '08 Sep 2026 - 10:00-11:00', 'Baramati Procurement Centre - 24 km away'. It also shows 'Current position: #7', '6 farmers ahead', and 'Estimated wait: 42 minutes'. Buttons for 'Track queue' and 'I missed my slot' are present.
- Procurement Journey:** A progress bar showing steps: Booked, Arrived, Gate check-in, Weighing, Quality check, Accepted, Payment processing, and Payment completed. The current step is 'Gate check-in'.
- PAYMENT STATUS:** '₹11,250', 'Bank: SBI - Transaction ID will appear after transfer.', and a 'Processing' status.
- CENTRE ADVISORY:** 'Shirur delayed' with a '+45 min' delay and a 'Move slot' button.
- BASED ON YOUR LOCATION:** 'Where should you go?' with a note 'Rule-based comparison of travel, queue and available slots.'
- Centre Recommendations:** Three cards for 'Shirur Centre', 'Baramati Centre', and 'Daund Centre'. Each card shows travel distance, travel time, and wait time. Baramati Centre is marked as 'RECOMMENDED'.

A caption at the bottom reads: 'Rule-based comparison of distance, slots and congestion'.

Centre recommendation and congestion comparison

2.2 Book a procurement token

1. Open **Schedules** and select **Check eligibility**.
2. Choose the centre and preferred time window.
3. Enter quantity and confirm ID, bank and land/tenancy declarations.
4. Press **Confirm and book token**.

Eligibility and token-booking flow

3. Queue, procurement and recovery

The live journey is: **Booked** → **Arrived** → **Gate check-in** → **Weighing** → **Quality check** → **Accepted** → **Payment processing** → **Payment completed**. Wait time changes as centre staff progress the queue.

Farmer-facing procurement status and estimated wait

Missed-slot recovery

From the active token, select **I missed my slot**. Choose the next suitable centre/time and confirm rebooking.

4. ProcureBot automated assistant

Open **Support** and keep **ProcureBot help** selected. The rule-based assistant answers common procurement questions instantly without an external AI account. It covers token booking, eligibility documents, queue ETA, missed slots, payment status, regional languages and escalation to an admin.

- Use a quick-question chip for the fastest demonstration.
- Type a short question such as “What documents are needed?”
- For an individual case, switch to Live admin chat.

Why rule-based?

The hackathon build remains predictable, free to operate and useful even when no external AI service is available.

5. Live admin chat

Farmers and centre staff can contact the administrator directly. The conversation displays the participant name, stores message history in the hosted database and places media in managed object storage.

Send text and media

1. Select **Live admin chat**.
2. Type a message, or press  to attach a photo, short video or audio file.
3. For a voice note, press , allow microphone access, speak, then press it again.
4. Press **Send**. Attachments are limited to 12 MB.

Read receipts, editing and deletion

- **Sent** ✓ means the message reached the service.
- **Seen** ✓✓ means the other role opened the conversation.
- Edit changes your own text and marks it as edited.
- Delete removes content and its attachment; admins may moderate any message.
- A short chime plays for new incoming messages after page interaction.

Administrator workflow

Sign in as Administrator, open **Live chat**, select a named conversation with an unread badge and reply. Opening the conversation issues the read receipt.

6. Centre staff and administrator

Centre staff

The centre dashboard shows green/yellow/red load indicators, expected arrivals and the active queue. Use the action button to progress the selected token through every stage.

Staff move farmers through the queue in real time

Centre load and live queue workflow

Administrator

The administrator monitors capacity and congestion, creates schedules, explores 100,000 deterministic demonstration records, sends alerts and manages live support.

Administrative overview

7. Data and alerts

Records explorer

Filter 100,000 records by crop, centre and status, then sort by date, crop, quantity, wait or centre. The generated dataset is deterministic for repeatable judging.

Filter and sort by crop, centre, status, quantity and wait

Filterable and sortable procurement records

Notifications

Enable phone alerts grants browser notification permission. A custom alert appears in-app and on the current device. The preset Twilio button demonstrates trial delivery; production custom SMS requires approved sender/template registration and compliance controls.

Notification centre and farmer alerts

8. Installable Android app

ProcureFlow is a Progressive Web App (PWA), so the tested public website can be installed without maintaining a separate APK during the hackathon.

1. Open the public HTTPS URL in Chrome on Android.
2. Select **Install app** when available, or Chrome menu → **Add to Home screen**.
3. Confirm and launch ProcureFlow from its home-screen icon.

Core screens are cached for fast reopening. Live queue data, chat, media and alerts require internet connectivity.

Languages and accessibility

Use the top selector for English, Hindi or Marathi. The responsive layout uses large touch targets, status colours plus text labels and mobile bottom navigation.

Regional-language interface

9. Troubleshooting and production checklist

Issue	Resolution
Chat does not load	Check internet, refresh and sign in again.
Microphone is blocked	Allow microphone in browser site permissions.
Install button is missing	Use Chrome menu → Add to Home screen.
No sound	Interact with the page once and check device mute.
Media is rejected	Use a photo/video/audio file below 12 MB.
Language remains English	Choose Hindi or Marathi again and refresh the route.

Production boundaries

This MVP uses demonstration identities. A rollout must integrate authoritative authentication, role authorization, consent and retention policy, attachment malware scanning, audit logs, rate limiting, backup/restore testing, accessibility review and approved messaging templates.

Recommended 4-minute demonstration

1. Farmer: compare centres and book a token.
2. Staff: progress the queue and show ETA/journey updates.
3. Farmer: ask ProcureBot, then send a photo or voice note.
4. Admin: open the named conversation, reply and show Seen ✓✓.
5. Install the PWA and finish with multilingual and records views.
